Use Rebel Heart's Dust Control Service for added safety and to reduce maintenance costs.

Without dust control, fine dust particles on work sites can become dangerous due to reduced visibility and inhalation. These particles can also increase equipment maintenance costs. Rebel Heart's Dust Control Service can help mitigate these factors. In addition, our application technology allows us to customize the amount of product being applied, which ensures you are only paying for the exact amount needed to get the job done right.

Maintenance Costs: Sprayed surfaces require less maintenance which mean your yard/road will last longer. This saves you on labour, equipment, and fuel costs.

Aggregate Costs: With proper yard and road spraying, you will save on aggregate replacement as your unpaved surfaces become more stabilized.

Construction Costs: The calcium chloride application will speed up the compaction process which allows for less rolling to achieve greater density. This means greater savings on labour.

Added Safety: Airborne dust creates a safety hazard as it obscures visibility and reduces air quality. Dust control allows you to safely operate equipment while maintaining visibility.

Dust Control: We use Tiger 32 Calcium Chloride solution, which retains moisture for extended periods of time. It will hold more dust down for longer.

- ▶ Product keeps dust down longer than water
- ▶ Perfect for roads, construction sites and yards
- ▶ Various products available (including non-toxic)
- ▶ Raven controls ensure precise application
- ▶ GPS equipped
